専門分野 Academic Field	Linguistics

平成 27 年度　研究計画　　Research Plan FY2015

主たる研究テーマ Principal Research Subject	Mood in Hungarian Subordinate Clauses

The main topic of my research is mood in subordinate clauses in Hungarian, and in particular the use of the use of mood in subordinate clauses. The research uses the notions and concepts of Cognitive Linguistics and aims to systematically describe the phenomena in question using extended corpora of various kinds.

This year, as the broader context of my research, I will focus on the description of the semantics of Hungarian complex sentences using the theoretical framework of Cognitive Grammar of Langacker. The goal of this part of the research is to describe the semantics of the linguistic elements that take part in the expression of complex sentences and to describe their relationship with the mood of the subordinate clause.
